**RE: PATENT APPLICATION**
**TITLE: VERSATILE AXIAL FAN AND CENTRIFUGAL SHUTTER MECHANISM**
**Patent Application N. 10/679.475**

Mr. Verdier,

I understood from our phone conversation of last week that during this week you are going so examine my application and am ready anytime to answer to your questions.

With the sole scope to easy your work and to understand my invention I am sending 3 drawings 1,2,3 of the fan as was built and a drawing Fig. 5 bis to clarify the concept of the direct connection of the centrifugal device 17 with the shutter assembly.

It will take some time to introduce in the market this new product. The extraordinary fan was designed with the growers of a poultry house in mind, it is practically maintenance free and it will save at least 15% of energy in rapport to existing poultry fans. If we consider the number of existing poultry houses fans (millions), with this fan the grower will save a great deal of energy. In a poultry house building there are about 11000 birds poor ventilated and cooled and during heat waves get diseases and die,especially if wind blows against the fans and static pressure increase dramatically and the CFM drops like a rock, but not with my fan with radially adjustable shoes.

Please note that on the published application I noted that the area code of my address is not correct. LEVEQUE shall be LEVESQUE, the area code shall be H7G 4S1
Thank you for your patience and understanding.

Angelo Milana P.Eng.
